Quality Control Layer 1: Research & Factual Accuracy Audit

Lesson: HTTP Requests and Responses | **Audit Reference:** AUDIT-FACT-B610E62C

Overall Audit Status: PASS **Factual Accuracy Score:** 96.0% **Issues Detected:** 1

1. Executive Accuracy Assessment

Technical accuracy is exceptionally strong. HTTP methods (GET, POST) and status code ranges (2xx, 4xx, 5xx) strictly adhere to RFC 9110 standards. Source attribution is verified against MDN and IETF documents.

2. Factual Claims Analysis & Corrections (1 item)

ID / Severity	Affected Section & Claim	Audit Finding & Supporting Evidence	Recommended Correction
FACT-B7C05A LOW	**Section:** 4. In-Depth Breakdown: Methods & Status Code Classes *"503 Service Unavailable: Server temporarily overloaded or down for maintenance."*	While accurate, RFC 9110 specifies that 503 responses can also include a 'Retry-After' header advising clients when to retry. Adding this strengthens technical completeness. **Evidence:** RFC 9110 Section 15.6.4 (Service Unavailable) & HTTP Retry-After header specifications.	**Fix:** 503 Service Unavailable: The server is temporarily unable to handle the request due to maintenance or overload. Servers often include a 'Retry-After' header indicating when clients may retry.

3. Verification Scope & Limitations

Google Books 'HTTP: The Definitive Guide' was cited based on published metadata and preview chapters; full internal pagination was not dynamically crawled.

4. Conclusion & Certification

Factual QC Audit PASSED. The lesson is grounded in authoritative RFC specifications with high technical integrity.
